These angles noted are the same on the opposite side of the W. Just imagine folding the paper in half (hamburger style) and copying the angles to those that touch.

This is a 4" by 4" cube that is centered with the point of the W. You only need to avoid it. However, you will not lose points if you hit it. It is a decoration on the course. You are supposed to knock over the toilet paper roll right across from it for this obstacle.
